From October 2019-December 2019

Roles and Responsibilities

- Data Mining
- Data Cleaning
- Data Visualization and Analysis on Dashboards
- Creating Custom Data models and Algorithms
- Using predictive models to improve customer experience and revenue generation
- Coordinating with various technical /Functional teams to implement models and monitor results
- Developing processes, techniques and tools to analyze and monitor model performance while ensuring data accuracy.

Project worked on:

Product: Lipa Na Mpesa

The aim of the project was to give insights to businesses that have incorporated the Lipa Na Mpesa feature, on their transactions performance as well as make it possible for them to understand their customers, and I did this through customer segmentation. I aggregated this information on a visualization dashboard. And went further to do sales forecasting with an aim that these users understand what is likely to happen in future in case the same trend continues.

SOFTCOM BUSINESS SOLUTIONS LIMITED

Title

Software Developer

Duration

From October 2018-October 2019

Roles and Responsibilities

- Writing and implementing efficient code majorly in C# programming language with HTML, CSS and JavaScript languages for the front end, ASP.NET, MVC, and JavaScript frameworks like Angular JS and React and MS SQL Server for the database.
- Researching, designing, implementing and managing developed software programs
- Developing quality assurance procedures and testing and evaluating the developed solutions
- Identifying areas of modification in existing programs and developing the modifications
- Generating system reports using crystal reports

- Working closely with other developers, UX designers, business and system analysts for a common goal

Projects worked on

Softcom Business Solutions Limited majorly deals with the provision of a Hospital Management Information System. The system is designed into modules. I participated in the development of the below modules:

The Patient Module

This module is used for patient management and to control a patient's flow. From registering them, getting the data of their health condition, view the treatment and check their medical history and reports.

The Comprehensive Care Centre Module

This is an outpatient initiative that caters for patients with retro-viral disease. This module was focused on HIV patients. The aspects focused on include monitoring the drug adherence, inquires on the side effects of the drugs, monitoring the progress of a patient as well as creating a support network.

The Human Resource Module

This module keeps track of all the hospital employees' records from their employment, payrolls, leaves, appraisals, announcements, meeting schedules and specific employees' roles and responsibilities.

Generation of reports

This module helps management collect, analyze and view the performance data in a comprehensive format.
